PROFESSIONAL SUMMARY

Data Engineer with around 5 years of experience building data pipelines and cloud-based data solutions across AWS, Azure, and GCP, with a strong focus on Databricks and Azure Data Factory. I also have some DevOps background, covering containerization, CI/CD, and infrastructure-as-code, which comes in handy when owning pipelines end-to-end.

PROFESSIONAL EXPERIENCE

Data Engineer

Ingsoftware/ASML | Niš, Serbia | January 2026 – Present

- Led distributed data processing on Databricks and Apache Spark across 10+ TB datasets, using Delta Lake for ACID transactions on AWS. Extended the same patterns to GCP (BigQuery, Dataflow) in a multi-cloud context, maintaining 99.9% uptime across environments
- Worked on data governance across Databricks and Delta Lake, covering data quality checks, access control, and lineage tracking for production datasets on AWS
- Optimized critical Spark jobs on Databricks, reducing average runtime by 40% through partition tuning, caching strategies, and cluster right-sizing across production workloads

Data Engineer

VegaIT | Niš, Serbia | June 2024 – January 2026

- Built and maintained 20+ ETL/ELT pipelines using Azure Data Factory and Apache Airflow, implementing reconciliation mechanisms, data quality controls, and transformation logic that improved data accuracy by 35%
- Architected data warehouse solutions on AWS Redshift and Databricks Delta Lake, processing 5+ billion records with optimized schema design that improved query performance by 40%
- Developed analytical models and complex SQL queries for reporting and business intelligence, creating 25+ Power BI dashboards
- Handled DevOps aspects of data platform delivery, including containerized deployments on AWS ECS/EKS with Docker and Kubernetes, IaC with Terraform, and maintaining CI/CD pipelines across AWS, Azure, and GCP in a multi-cloud setup

Data Analyst

Gemini Software | Niš, Serbia | July 2022 – June 2024

- Developed automated data transformation and ingestion workflows using Python (Pandas, NumPy), reducing manual processing time by 60%
- Performed data engineering tasks including cleansing and collation from internal and external sources, writing complex SQL queries with advanced joins, window functions, and CTEs
- Integrated third-party APIs and contributed to cloud migration initiatives on AWS and Azure, building familiarity with cross-platform data movement and laying the foundation for later multi-cloud work

TECHNICAL SKILLS

Cloud & Data Platforms AWS (S3, Glue, Redshift, Lambda, ECS/EKS, Athena, DMS), Azure (Data Factory, Synapse Analytics, Databricks, Delta Lake), SQL Server, GCP	Data Engineering ETL/ELT Pipelines, Data Warehouse Architecture, Apache Spark, PySpark, Apache Airflow, Data Modeling, Streaming Data, Data Quality & Governance
Database & SQL SQL Server, Advanced SQL, Database Design, Query Optimization, Stored Procedures, Performance Tuning	Programming & Tools Python (Pandas, NumPy, PySpark, pytest), SQL, Git, Docker, Kubernetes, Terraform, Bash Scripting, CI/CD
Analytics & Visualization Power BI (Reports & Dashboards), Power BI Report Builder, Statistical Analysis, Business Intelligence	Data Science & ML Machine Learning (Scikit-learn, TensorFlow), Statistical Analysis, Deep Learning, API Integration

EDUCATION

Master's Degree in Data Science & Engineering

Faculty of Electronic Engineering, Niš | 2023 – 2025 | GPA: 9.7/10.0

- Thesis: Optimization of Distributed Data Pipeline Architectures on Cloud Platforms

Bachelor's Degree in Computer Science & Informatics

Faculty of Electronic Engineering, Niš | 2019 – 2023 | GPA: 8.7/10.0

- Thesis: Benchmarking Distributed Data Processing Frameworks for Large-Scale Analytics
